

Pedal Beam Change

E-CT & S-CT

We have made a change to the design of the pedal beam assemblies on our E & S Series Cross-Trainers. The original version was a one-piece beam (Fig 1); we have added a joint to the assembly shown in (Fig 2) to extend the life cycle of the link assembly.

Fig 1

Fig 2

The version 2 Pedal Beams come in two parts for each side, below are the new part numbers:

- Left Pedal Beam: 740-7971-29-KT
- Left Pedal Assy: 740-7976-29-KT
- Right Pedal Beam: 740-7977-29-KT
- Right Pedal Assy: 740-7984-29-KT

The new pedal beam kits are backwards compatible with any 9-6040 & 9-6080 Cross-Trainers. This change has been implemented into production, beginning with serial number CTEB1411-L01000.
