DIAGNOSTICS: SYSTEM TEST – SPEED MANUAL MODE

Upon entry into this test the letters SM (Speed Manual) will be in the profile window. This test allows the user to test the main drive motor and controller controlling the motor rpm. The user can select a target motor rpm by using the speed arrow keys. The actual motor rpm as calculated by the speed feedback sensor is shown in the actual portion of the message center.

The incline system can be activated in this test as well. However, the display will only show the target incline for two seconds while the incline keys are being pressed. It will then return to showing the speed information.

Press the 'CLEAR' key to exit the Speed Manual test and return to the Speed Automatic test.
Press the 'ENTER' key to advance to the Controller Errors test.
