DIAGNOSTICS: SYSTEM TEST – SPEED AUTOMATIC MODE

Section II

Upon entry into this test the letters SA (speed automatic) will be in the profile window. This test allows the user to test the main drive motor and controller controlling the target speed. The user can select a target speed by using the speed arrow keys. The actual speed as calculated by the speed feedback sensor is shown in the actual portion of the message center.

The incline system can be activated in this test as well. However, the display will only show the target incline for two seconds while the incline keys are being pressed. It will then return to showing the speed information.

Press the 'CLEAR' key to exit the Speed Automatic test and return to the System Test Menu.
Press the 'ENTER' key to advance to the Speed Manual test.
