

IMPORTANT SAFETY NOTICE

BELTS AND CABLES!

Body Masters Sports Industries, Inc. has an ongoing philosophy and commitment to provide the highest quality exercise equipment in the fitness and rehabilitative industries. Our products have been carefully designed and critically analyzed from a biomechanical engineering perspective to insure safe, efficient, long term operation.

However it must be realized that safe use of this equipment requires that owners carefully read and follow the Body Masters' Use Recommendations, Warnings, Maintenance Guidelines and Warranty Schedule. Failure to comply will not only reduce the life of the product but could also result in product failure and serious injury to the user!

Although Body Masters provides the highest quality of materials and workmanship in its products, the fact remains that component parts eventually wear out over time and use.

This is particularly true with reference to pliable moving parts such as CABLES and BELTS. In spite of any expressed and/or implied warranties, intervening factors such as improper use, unusually heavy use, improper installation, improper alignment, and poor maintenance serve to drastically reduce the usable life and safety of these components.

Be advised that dangerous conditions can arise *even* during warranty periods and that any expressed and/or implied warranties DO NOT NEGATE the owners' responsibility to insure that:

1. all belts and/or cables on all machines be *carefully inspected on a daily basis* for any signs of wear, fraying, de-lamination, and/or stretching;
2. any machine whose belts and/or cables are "*questionable*" in terms of condition be *immediately removed from service*; and
3. only genuine Body Masters Replacement Parts are used.

For any Replacement Parts or Warranty Performance
