

Weight Pin Tether Kit

Includes:

- 1 x 48" high strength coil
- 2 x split rings attached on either side of the coil
- 1 x Nylon tie-strap
- 1 x washer
- 1 x screw

Installation instructions:

1. Connect the split ring at one end of the coil to the cable above the selector rod. . If the design of the weight stack does not provide a place to connect the split ring, connect it to the top of the selector rod using the tie strap. Make sure the connection does not impede the movement of the selector rod.
2. Connect the split ring on the other side of the tether through the hole on your weight pin handle. If there is no hole you can drill one using a 7/32" drill bit.
3. To attach the tether to the "Ball" or "L" handles, simply slide the loop of the tether around the shank of the weight pin. If the weight pin does not slide on easily, wet the loop with a small amount of saliva to ease the pin through the loop. When the saliva dries, the tether will be secure on the pin. Slide the loop as far as possible up the shank of the pin so it does not interfere with the penetration of the pin. If the pin does not penetrate through the weight stack hole, you will need to use a longer pin.
4. To attach the tether to a "Ball" handle using the Washer and Screw, simply pre-drill a small starter hole where desired on the "Ball" itself. Removed the split ring on one end, and attach the screw to the "Ball", going through both the washer and the end of the tether.

Feel free to contact us if you have any questions or problems installing the tether.
