

C842 and C846 upright bicycle seats that are shipped from Precor's parts warehouse are equipped with a standard bicycle seat mounting. These seats may be used either in a "standard" or Precor seat mounting configuration.

In order to mount the seat on a Precor seat post, the "standard" mounting bracket must be removed from the seat. This may be accomplished by removing the three seat bracket mounting nuts shown in the illustration below. The hardware removed may then be used to mount the seat on the Precor seat post.
