If CP-- is shown in the controller display, then the N-V RAM has been reinitialized. A new configuration must be selected for the controller to operate. To reinitialize the N-V RAM, you must
> Enter the service mode by simultaneously pressing **Stop Belt, Faster** and **Slower**.
> Press **Stop Belt** and **Cool Down.**

To select the CP number: Clubtrack

1. Enter the service mode by simultaneously pressing **Stop Belt, Faster** and **Slower**.
2. Select the configuration number by holding down **Stop Belt** and depress **Input** + or **Input -** until the correct configuration number appears in the display.
3. Press **Select** to store the configuration.
4. Exit the service Mode by simultaneously pressing **Stop Belt, Faster** and **Slower**.

To select the CP number: **Clubtrack Plus HR**

1. Enter the service mode by simultaneously pressing **Stop Belt, Faster** and **Slower**.
2. Press the Menu button 3 times.
3. Press F3 Select configuration
4. Simultaneously press **Stop Belt, Faster** and **Slower** to exit the Service Mode and save the configuration.

CP--
CP-- is an indication that the controller has lost it's configuration in memory. The configuration may be able to be restored by selecting the CP code again on the Control Panel. See page 4-30 and 4-31 of the service manual.

If this does not correct the problem then the controller will have to be replaced.
